

Glossary of Terms

EP

EP stands for Expected Points, and is the statistic used to calculate PPA. EP takes the down, distance, and field position situation and calculates a measurable statistic from these variables.

PPA

PPA stands for Predicted Points Added, and is the statistic used in calculating the progress a team has made in the Athletic Storm coach rating algorithm. PPA is calculated by first calculating the EP at the start of each play and comparing that to the EP at the end of the play. In doing this PPA shows how a team is performing from game to game. This gives Athletic Storm a comparable statistic

SP+

SP+ is a college football rating system calculated by looking at a team's play-by-play and drive data. In the Athletic Storm coach rating algorithm, SP+ is used in taking away the bias of competitive resistance when looking at the growth of a team's PPA.
